

ANGULAR EXERCISE 6

Skills: Components, routing

Create an AngularJS app with two components: dog and cat. The dog component shows an image of a dog and the word “dog”, or the name of your favorite dog. The cat component does the same for a cat. Set up routing so `#!/dog` displays the dog component and `#!/cat` displays the cat component. Display links between the two routes. Set up one of the two as the default route when a user first arrives at the site.
